PIR Detector

Wireless

MC-335R

The MC-335R is a PIR technology intruder detector designed to detect human body movement in a protected area. Digital processing ensures a high immunity to false alarms and outstanding stability. The MC-335R uses a sophisticated radio communication protocol with a high level of data safety. The detector makes regular auto testing and reports its conditions regularly to the system for full supervision. Built-in tamper switch trigger an alarm if there is any attempt to tamper with the detector. An automatic testing mode makes testing an ease.

Specification

Overview	
Detection method	PIR
Power Supply	3 VDC lithium
Battery Life	Battery life:
alarm indication	4~5s
Start up time:	30s with LED indication
Transmit range	max. 150-200 m (open area)

Associated Zones	8 Groups
Timing Arm/Disarm	4 Groups
white light protection	4000 lux
Transmit freguency	433MHz
Detection rage	6m
environmental	-10C to +40C
Demision	110*95*49mm110*95*49mm
